(2008.01)

The following is an explanation of the terminology about mutual funds found on the Internet and used in mutual fund listings in *The Wall Street Journal*.

Understanding Common Mutual Fund Terms Found on the Internet

Annual Operating Expense The annual operating expense is an annualized figure expressed as a percentage. It is the ratio of expenses to average net assets in the fund. Expenses may include advisor, shareholder servicing, custodial, accounting, legal, auditing, prospectuses, registration, proxy and annual meeting and directors expenses. Most of the mutual funds in the Maryland plans rebate part of their annual operating expense back to the plans and then distributed to participants' accounts.

Investment Objectives Investment objectives are the desired outcomes, or goals, of the fund manager.

Investment Strategies Investment strategies are the procedures used to meet the fund's stated objectives.

Total Return Total return is the annual return, expressed as a percentage, on an investment including appreciation and dividends or interest. For mutual funds, the total return is the change in the net asset value of the fund over a period plus (or minus) and any reinvestment of dividends and capital gains (or losses).

Turnover Rate The portfolio turnover rate measures the frequency with which securities in the fund are bought and sold. It is the number of securities traded as a percentage of the total number held. A turnover rate below 50% is considered below average. A rate between 50% and 100% is average, and a rate above 100% is high.

Yield Yield is the percentage rate of return paid on a mutual fund in dividends (which are distributions of interest from fixed-income securities and dividends from stocks). It is calculated by dividing the dividends paid by the price per share. For example, a mutual fund that sells for \$6 a share and pays an annual dividend of \$2 per share has a yield of 3%.

Understanding Mutual Fund Newspaper Listings

These terms are also used on the Internet.

NAV	NET CHG	YTD %RET
7.47	+0.04	+2.1
11.18	+0.02	+1.5
10.79	+0.01	+1.6
24.00	+0.11	+8.3
22.26	-0.10	-4.8
24.79	+0.17	-14.3
10.87	+0.04	+3.2

NAV

NAV stands for the net asset value per share of the fund at the close of the previous business day. A fund's NAV is generally calculated by adding up the value of all stocks or other securities owned by the fund, subtracting the liabilities, and then dividing by the number of fund shares available. The Maryland plans purchase mutual fund shares at the NAV and accept only no-load arrangements with funds.

NET CHG

The net change column shows the change in the NAV from the preceding day's quote. A plus (+) sign indicates a gain and a minus (-) sign indicates a loss.

YTD % RET

YTD % return refers to the year-to-date percentage change in the value of the fund. That includes reinvestment of any dividends and capital gains, subtracting the fund's annual expenses.
